## Quantrom

## Impact of changes in bond yields - part 2

During January, we have been able to reinvest the additional excess cash position we had at end of December 2023. The interest rates we are receiving is somewhat lower than previously, but fully in line with the overall lower interest rates in the financial markets and the narrowing of credit spreads.

## Monthly comments

Quantrom P2P Lending had a return of 0.42\% in January 2024, which gives a year-on-year return of 6.89\% \%.

Interest payments in January 2024 were in line with our expectations. However, interest received has fallen as a function of the generally falling interest rates.

In January 2024, we received minor recoveries. The loan originator where we experienced irregular payments has provided a schedule for several settlements of pending payments. We have in January received the scheduled payments and has as a consequence suspended our provisions regarding this as a long as we receive the scheduled payments.

On our portfolio we have taken a provision equal to $0.21 \%$ of the value of the portfolio in January.

## Invested portfolio excluding cash.

I January 2024 we have reestablished the portfolio allocation as we prefer.
Car loans are now almost 75\% of value of the portfolio while personal loans are $11 \%$ of the value of the portfolio. Property related loans are 15\% of the value of the portfolio.

Figures 2-12 provide more details on the composition of the loan portfolio.
